Outline

Outline

Tulis Statement C++ (Deitel and Deitel, 2016)

1. Print the message `"Enter two numbers"`.
2. Assign the product of variables `b` and `c` to variable `a`.
3. Input three integer values from the keyboard into integer variables `a`, `b`, and `c`.

Outline

Given the algebraic equation $y = ax^3 + 7$, which of the following, if any, are correct C++ statements for this equation?

A. `y = a * x * x * x + 7;`
B. `y = a * x * x * (x + 7);`
C. `y = (a * x) * x * (x + 7);`
D. `y = (a * x) * x * x + 7;`
E. `y = a * (x * x * x) + 7;`
F. `y = a * x * (x * x + 7);`

Outline

Arithmetic

Write a program that asks the user to enter two numbers, obtains the two numbers from the user and prints the sum, product, difference, and quotient of the two numbers.

Outline

Write a program that inputs three integers from the keyboard and prints the sum, average, product, smallest and largest of these numbers. The screen dialog should appear as follows:

```
Input three different integers: 13 27 14
Sum is 54
Average is 18
Product is 4914
Smallest is 13
Largest is 27
```

Outline

Diameter, Circumference and Area of a Circle

Write a program that reads in the radius of a circle as an integer and prints the circle?s diameter, circumference and area. Use the constant value 3.14159 for ?. Do all calculations in output statements.

Outline

Odd or Even

Write a program that reads an integer and determines and prints whether it's odd or even.
[Hint: Use the remainder operator (%). An even number is a multiple of two. Any multiple of 2 leaves a remainder of zero when divided by 2.]

Outline

Digits of an Integer

Write a program that inputs a five-digit integer, separates the integer into its digits and prints them separated by three spaces each. [Hint: Use the integer division and remainder operators.] For example, if the user types in `42339`, the program should print:

```
4   2   3   3   9
```
